## **DETAILED ACTION**

### ***Drawings***

Figures 17-18 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki [US 6,714,111 B2] in view of Saito et al. [JP 2002-141227].

Suzuki discloses an inverter transformer comprising:

- at least one winding unit comprising a bar-shaped magnetic core [23a, 23b], a primary winding [24] and a secondary winding [25a, 25b] wound around the bar-shaped magnetic core;
- an external unit [21] surrounding a transformer body.

Suzuki discloses the instant claimed invention except for a magnetic resin.

Art Unit: 2832

Saito et al. discloses a magnetic inductor device comprising:

- a bar-shaped core [11];
- a coil [12] wound about the bar-shaped core;
- a magnetic ferrite resin [13b] disposed around the coil and the bar-shaped core; and
- an external unit [13a] surrounding the magnetic resin/the coil and the bar-shaped core.

It would have been obvious to one having ordinary skilled in the art at the time the invention was made to include magnetic resin about the winding unit of Suzuki, as suggested by Saito et al., for the purpose of providing magnetic shielding.

Regarding claims 2-3 and 9, the specific arrangement of magnetic resin and the specific magnetic relative permeability would have been an obvious design consideration for the purpose of improving magnetic shielding.

Regarding claims 4-5 and 8, the specific flux density of the external unit, the specific magnetic resistance, the specific material of the external unit would have been an obvious design consideration for the purpose of enhancing magnetic properties.

Regarding claims 6-7, the specific configuration of the external unit would have been an obvious design consideration based on the intended applications/environments use.

Regarding claim 10, iron powder is a known material for use in magnetic device.
